EU citizen and Malta resident | English and Polish

PROFESSIONAL PROFILE

Junior automation specialist with hands-on experience building multi-stage workflows in n8n, Appsmith, Supabase and PostgreSQL, supported by OpenAI and Gemini integrations. Developed working portfolio systems for prospecting, leasing operations, client intake, appointment scheduling and candidate review. Focused on clear business rules, reliable data handling, validation and human control over decisions and external communication.

CORE SKILLS

- Workflow automation: n8n, webhooks, REST APIs, scheduled processes, branching, retries and error handling
- Applications and data: Appsmith, Supabase, PostgreSQL, Neon, data modelling and working SQL knowledge
- AI integration: OpenAI, Gemini, optional RAG, structured outputs, validation and human-review workflows
- Business integrations: Gmail, Google Drive, Google Calendar, Telegram and Vapi
- Additional tools: Make, Python, ElevenLabs and Synthesia

PROJECT EXPERIENCE

Independent Automation and Workflow Projects

February 2026 - Present

Malta | Registered self-employed activity and portfolio development

- Designed, built and tested connected workflow systems that combine automation, databases, AI services and operator dashboards.
- Translated business processes into triggers, decision paths, data operations, review states and controlled external actions.
- Documented projects through screen demonstrations, case studies and technical presentations.

AI Leasing CRM and Telegram Property Assistant

n8n | Supabase | Appsmith | OpenAI | Gmail | Telegram

- Built a 19-workflow leasing system covering inquiry intake, property matching, follow-ups, viewing management, document requests and closing leads as won or lost.
- Developed a Telegram assistant that recognises properties from complete or partial screenshots, combines context from additional images and supports controlled landlord follow-up.
- Kept communication and availability decisions under operator control while recording lead activity and status changes in Supabase.

Prospect Finder

n8n | Appsmith | Supabase | Google Places | OpenAI | Gmail | RAG

- Created configurable prospect searches with location and keyword variants, three-page result collection, limits and duplicate protection.
- Added AI enrichment, evidence-based qualification, optional knowledge-base context and validated offer and outreach generation.
- Built an Appsmith review queue where messages can be edited, approved or rejected before approved content becomes a Gmail draft.

SELECTED PROJECTS CONTINUED

BrightFlow AI Client Intake and Scheduling Platform

n8n | Appsmith | PostgreSQL and Neon | OpenAI | Vapi | Google Calendar | Telegram | Gmail

- Built a configurable intake platform for service businesses using website chat, email, Telegram text and voice, and Vapi call transcripts.
- Implemented conversation persistence, business-specific knowledge, appointment holds, calendar synchronisation, rescheduling and cancellation.
- Added privacy-request handling and escalation of urgent cases to a person through Gmail and Telegram alerts.

HR Candidate Sifter

n8n | Appsmith | Supabase | Gemini | Google Drive | Gmail

- Created a candidate intake and review workflow using Google Drive CV collection, duplicate protection and structured job requirements.
- Used Gemini to produce evidence-based candidate summaries, identify missing information and assign confidence without making automated hiring decisions.
- Built Appsmith review controls and separate actions for preparing or sending candidate communication.

TRAINING AND DEVELOPMENT

- n8n Academy - completed the available learning paths
- Make Academy - Foundations and Basics completed; further modules in progress
- Synthesia Academy - certification in progress
- Python course, Malta Digital Innovation Authority - 2026

WORKING APPROACH

- Tests duplicate handling, incomplete inputs, decision branches and failure paths instead of demonstrating only the expected route
- Uses AI assistance for longer SQL and Python tasks, then reviews, understands and adapts the resulting logic

EARLIER OPERATIONS EXPERIENCE

Howdens PLC and Wincanton Logistics | Warehouse Operative

June 2016 - August 2025

Northamptonshire, United Kingdom

- Worked in high-volume operations using scanners, voice-picking systems, stock-control processes and productivity targets.
- Trained dozens of new pickers and supported system setup, voice calibration, workplace safety and employee wellbeing.
- Operated across picking, replenishment, put-away, loading checks and dispatch in retail and food distribution.

Impact Recruitment and Earlier Warehouse Roles

2014 - 2016; Sep 2025 - Jan 2026

OCS Group, Panasonic, 99p Stores, Levi's and T.L.X. Electrical / Kazoop | UK

- Performed order auditing, stock control, returns inspection, quality grading and warehouse data entry.
- Worked with paper records, offline scanners, RDT devices and warehouse systems while checking order accuracy.

EDUCATION AND LANGUAGES

- General Secondary School, English-language profile, Poland - completed 2007
- University of Lodz - studies in Journalism and Pedagogy; no degree awarded
- Languages: Polish - native; English - fluent
